EDUCATION

Dartmouth College

GPA: 3.88/4.0

Bachelor of Arts in Computer Science and Human Centered Design

Expected June 2029

- **Relevant Coursework:** Problem Solving Via Object Oriented Programming (Data Structures & Algorithms) [java], Software Design & Implementation [C], Discrete Mathematics*, Foundations of Applied Computer Science*, Calculus III, Intro to Programming and Computation [python]
- **Activities:** ColorStack (Treasurer), HealthX Lab (ML Research), CodePath, First-Gen Office (CS Teaching Assistant)
- **Awards:** AI in the Physical World Award: DALI Technigala Hackathon 2026, awarded for **Sema Health AI**

SKILLS

Languages: C, Java, Python, JavaScript/TypeScript, Dart, SQL, HTML/CSS

Frameworks: Django, Flask, React, Node.js, Flutter, NumPy, pandas, scikit-learn, TensorFlow, Tailwind, Bootstrap

Tools: Git (Github), Linux, AWS, MySQL, Make, bash, Valgrind, VSCode, IntelliJ IDEA, Figma, Miniconda, APIs, Tailscale

Other Interests: Drumming, Soccer, Anime

WORK & LEADERSHIP EXPERIENCE

Evergreen AI, Dartmouth College

Hanover, NH

Software Engineering Intern & Project Manager

Oct. 2025 – Present

- Built and maintained a **Flask** web app that ingests, validates, and sanitizes **1,000+** dialogue turns daily from **200+** student writers for training Evie, Dartmouth's Wellness **LLM** chatbot, persisting the versioned data in **AWS RDS MySQL**
- Introduced a real-time dialogue chat platform using **WebSockets**, incremental **JSON** message synchronization, post-send editing ability, and enforced minimum turn count before an automated conversion into standardized training dialogue format
- Engineered a plagiarism-detection pipeline using **MinHash** signatures and **locality-sensitive hashing** to flag near-duplicate dialogues with similarity greater than **70%** asynchronously on submission, protecting training-data integrity
- Collaborated to build a **red-teaming** sandbox enabling selected student writers to probe **Evie's** safety guardrails through live conversations, logging reproducible, **severity-rated** findings that informed fixes before production deployment
- Enhanced user engagement by introducing Evie-themed **Dino** and Daily **Wordle** games with live weekly-reset leaderboards, **API-driven** word generation, and a client-side break timer using **localStorage** to avoid unnecessary database requests

The Dartmouth: America's Oldest College Newspaper

Hanover, NH

Software Development Intern

Apr. 2026 – Present

- Built a **Python** automation tool collecting **2,000+** alumni contact records across **50+** class years with **duckduckgo-search** library, **LDAP**, and **LinkedIn** lookups, exporting structured datasets with **pandas** and **OpenPyXL** at **90%** accuracy
- Engineered fault-tolerant batch processing with checkpoint resumability, deduplication, and **API rate-limiting**, enabling the scraping to run for hours and resume seamlessly even after interruptions while preserving data integrity

PROJECTS

Sema Health AI | *Flutter, Gemma (MediaPipe), ONNX Runtime, NLLB-200, SQLite, OpenStreetMap*

- Collaborated in a team of 4 to build an offline-first health app using **Flutter** and on-device **Gemma 4** inference via **MediaPipe**, with **SHA-256**-verified model downloads for secure, private AI assistance without an internet connection
- Built a **YAML**-configured clinical triage engine that uses a medical knowledge graph to identify emergencies before generating AI responses, hence blocking unsafe medication advice
- Designed an offline multilingual voice pipeline using **ONNX Runtime**, **NLLB-200**, automatic speech recognition, and text-to-speech, enabling private conversations across **5** languages

Tiny Search Engine | *C, bash, Make*

- Built a compact search engine in **C** with a **BFS** crawler for traversing web pages, an **inverted index** for fast word lookups, and a querier supporting **AND/OR** Boolean queries
- Automated builds and regression testing with **Make** and **Bash**, testing the **crawler**, **indexer**, and **querier** to cover for argument validation, syntax of the queries, and case-folding to catch integration bugs before deployment

Collaborative Graphical Editor | *Java, ServerSocket*

- Engineered a real-time multiplayer drawing application in **Java** using a thread-per-client (**TCP**) and a custom state-sync protocol (**ADD, MOVE, RECOLOR, DELETE**) for edits, and full state sync so late-joining clients don't miss a thing
- Designed a thread-safe **Sketch** using a **TreeMap** with synchronized reads/writes, supporting selection of overlapping shapes by Z-order and accurate **Polyline** hit-testing for freehand drawings

ForumAbroad | *Python (Django), HTML, JavaScript, Tailwind CSS, Google Vertex AI, RAG, SQL*

- Engineered a full-stack and scalable study-abroad web app in **Django** featuring nested comment threads and view analytics; optimized database querying efficiency using bulk pre-fetching and **F() expressions** to prevent race conditions
- Integrated a **Google Vertex AI RAG** assistant that automatically indexes the forum's content using Django signals and **SHA-256** change detection, with cited sources and prompting to prevent the forum's AI chatbot from hallucinating
